SOFTWARE PROJECT MANAGEMENT

Build better software, together.

A smarter workspace for planning, building, and delivering software.

12-SLIDE STARTUP PITCH DECK

Prepared as a first-draft PLP pitch deck • 2026

Software teams lose momentum between tools.

Work is spread across chat, spreadsheets, issue trackers, and documents—making delivery harder to predict.

Scattered work

Tasks, decisions, files, and deadlines live in different places. Teams waste time searching for the latest information.

Low visibility

Leads struggle to see blockers, workload, sprint progress, and risks until deadlines are already under pressure.

Slow handoffs

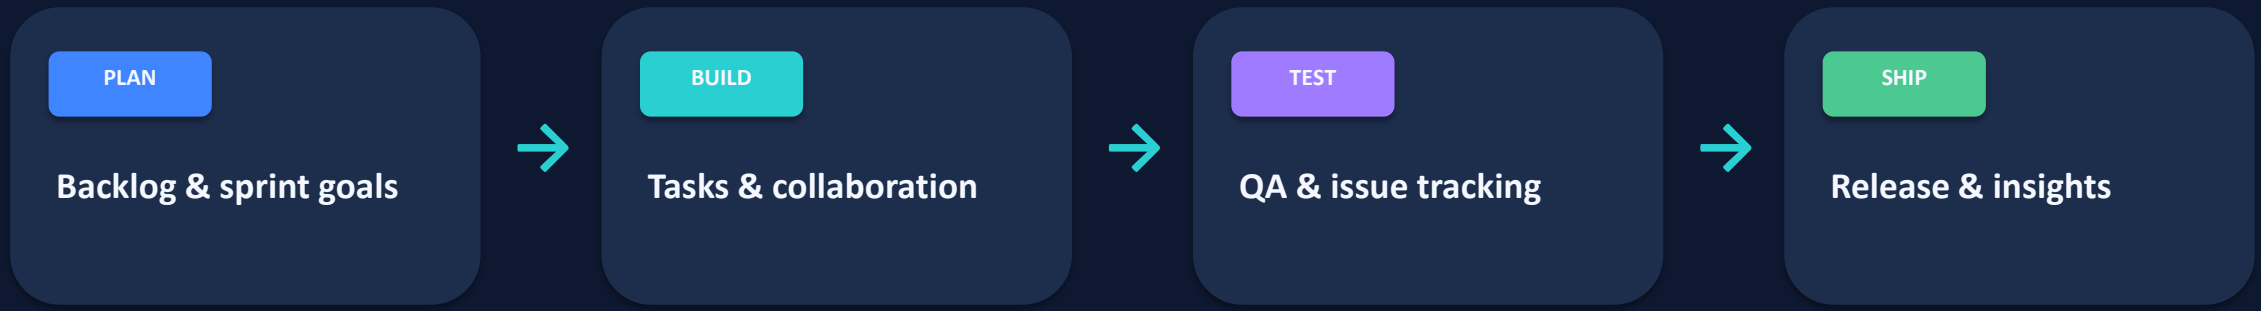

Unclear ownership and delayed feedback create rework between developers, designers, testers, and clients.

THE RESULT

Missed deadlines • Duplicated effort • Frustrated teams • Unpredictable releases

One connected workspace from idea to release.

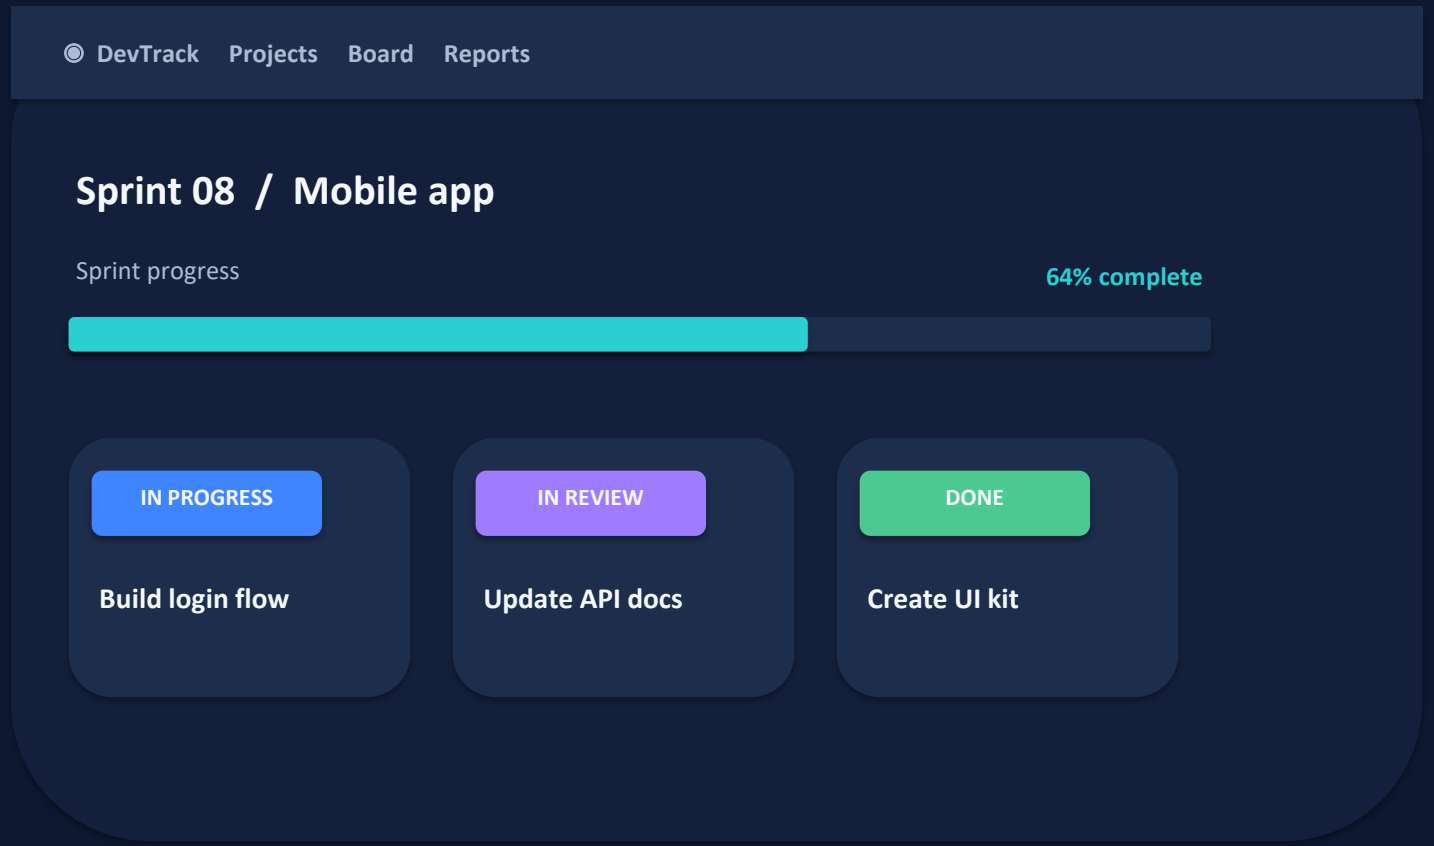

DevTrack brings planning, execution, communication, and delivery signals into one shared system.

- A single source of truth for every project
- Clear ownership, priorities, and due dates
- Live dashboards for progress, blockers, and delivery health

Designed around the daily workflow of a software team.

A clean, role-aware interface keeps the next action visible without overwhelming the team.

Project boards

Kanban and sprint views keep work organized.

Team collaboration

Comments, mentions, files, and decision history.

Delivery analytics

Burndown, cycle time, and blocker trends.

A focused entry into a growing software-work market.

Initial customer focus: small and mid-sized software teams, digital agencies, and technology-enabled businesses in East Africa.

5–50
Target team size

B2B
Primary customer

SaaS
Delivery model

East Africa
Launch region

Beachhead segment

Software agencies and startup engineering teams that need structure without enterprise-level complexity.

Expansion segment

IT departments, product teams, and university innovation labs managing multiple projects.

Market logic

Start with a clear niche, prove retention, then expand through integrations and partner referrals.

Market sizing note: validate TAM, SAM, and SOM with local customer interviews and credible industry data before investor use.

Freemium adoption, recurring team subscriptions.

A low-friction entry plan supports adoption; paid tiers unlock administration, automation, and advanced reporting.

FREE

$0

Up to 3 users
Core boards
Basic task tracking

TEAM

$8

Per user / month
Unlimited projects
Integrations & reports

BUSINESS

$15

Per user / month
Advanced permissions
Automation & priority support

Additional revenue opportunities

Onboarding & training packages • Custom integrations • Enterprise support

Simple enough for small teams. Structured enough to scale.

DevTrack competes on workflow clarity, fast onboarding, and a practical feature set—not on having the most features.

CAPABILITY	SPREADSHEETS	GENERAL PM TOOLS	DEVTRACK
Sprint & backlog workflows	Limited	Varies	**Built-in**
Developer-focused metrics	Manual	Add-ons	**Built-in**
Fast onboarding	Easy to start	Varies	**Guided**
Team collaboration	Fragmented	Available	**Integrated**

Positioning hypothesis: win with teams underserved by heavyweight enterprise tools and outgrowing ad hoc spreadsheets.

Earn trust with a narrow, measurable launch.

Begin with design partners, prove value in real projects, then scale through communities and referrals.

01 DESIGN PARTNERS

Recruit 5–10 local software teams. Observe their workflows and co-design the MVP.

02 PROVE VALUE

Run 6–8 week pilots. Measure time-to-visibility, task completion, and weekly active use.

03 SCALE CHANNELS

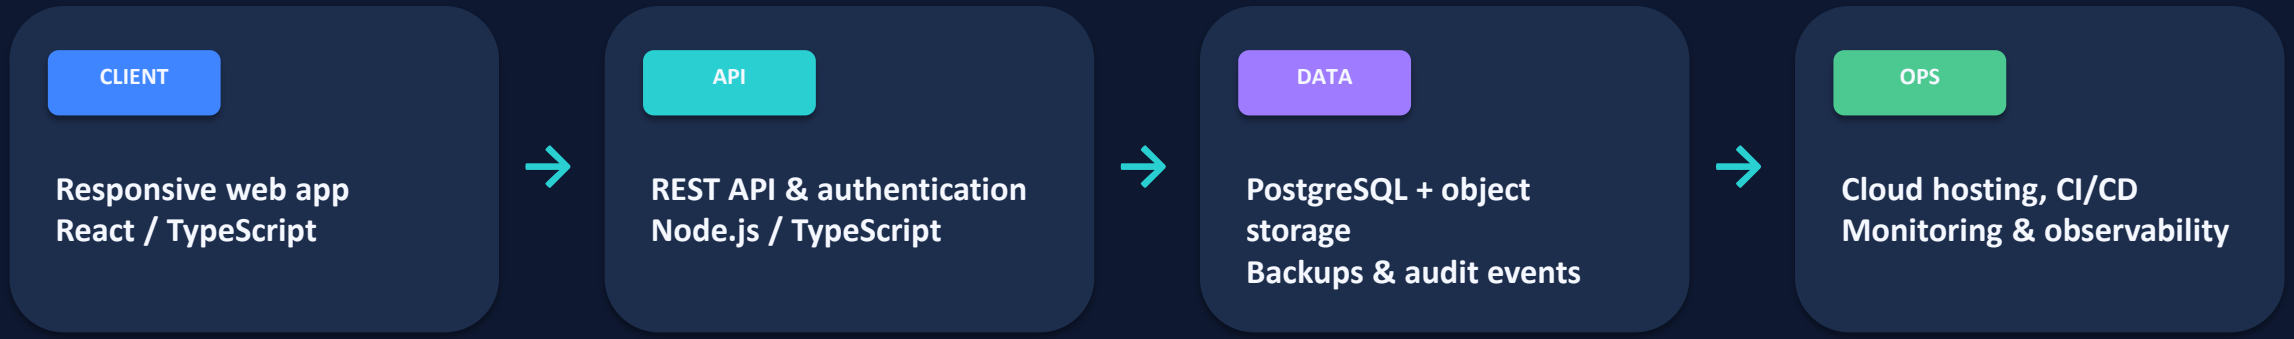

Publish case studies; partner with coding communities, accelerators, and software agencies.

Key acquisition metrics

Pilot-to-paid conversion • Customer acquisition cost • Activation rate • Monthly churn

Secure, modular, and built for continuous improvement.

A cloud-native architecture supports rapid iteration while protecting customer project data.

- Role-based access control and encrypted data in transit and at rest
- Automated testing, code review, and staged deployments
- API-first design for future integrations with Git repositories and chat tools

Technology choices are proposed for the MVP and should be confirmed against team skills, cost, and deployment requirements.

Illustrative three-year path to recurring revenue.

Planning assumptions only—not audited forecasts. Validate pricing, conversion, churn, and operating costs through pilots.

YEAR	PAID TEAMS	AVG. PAID USERS	ANNUAL REVENUE
Year 1	25	8	$19,200
Year 2	90	10	$86,400
Year 3	220	12	$316,800

Revenue assumption

Blended $8/user/month; average paid users shown above.

Main cost drivers

Engineering, cloud services, support, and customer acquisition.

Financial milestone

Target sustainable unit economics before aggressive expansion.

Build, validate, and improve in focused releases.

The first milestone is a useful MVP—not a feature-complete enterprise platform.

MONTH 1–2

Discovery & prototype

Customer interviews, user journeys, clickable prototype

MONTH 3–4

MVP build

Projects, boards, roles, comments, notifications

MONTH 5

Pilot launch

Onboard design partners; collect usage and feedback

MONTH 6

Iteration

Improve reliability, reporting, and paid onboarding

Core roles

Product lead • Full-stack engineer • UX/UI designer • QA / customer success

Early team members may cover multiple roles; hiring should follow validated customer demand.

Help us make software delivery more predictable.

We are seeking pilot partners and early-stage support to build, test, and launch the DevTrack MVP.

LET'S BUILD BETTER SOFTWARE

OUR NEXT MILESTONES

- 10 design partners
- Working MVP in 4 months
- First paid teams by month 6

Thank you
